Education

2021 - Present :
B.S Digital Communication and Multimedia Engineering
Hanoi University of Science and Technology (HUST)

CPA : 2.9/4.0 English levels: B2

Skills

Experienced in working with object-oriented programming languages :

- Languages: TypeScript, JavaScript, Java, C/C++.
- Frameworks: NestJS, Next.js 15, Spring Boot.

Databases & Caching:

- MySQL (TypeORM), MongoDB, PostgreSQL, Redis.

Tools & Platforms:

- Tools & Platforms: Git, Docker, Postman.

Trinh Trong Tinh

Fresher Software Engineer

Summary

A highly motivated Backend Developer with a strong foundation in Object-Oriented Programming and system architecture. Experienced in building scalable RESTful APIs using NestJS and Java Spring Boot. Passionate about database optimization, caching strategies (Redis), and developing robust, production-ready web applications. Eager to contribute technical skills to a dynamic engineering team.

Personal Projects

○ SaaS Task Management Platform (Kanban)

Tech Stack: TypeScript, NestJS, Next.js 15, MySQL, TypeORM, Redis, Tailwind CSS, Socket.IO, Stripe, Nodemailer

- Built a full-stack Kanban-based project management platform for managing workspaces, boards, lists, cards, checklists, comments, and labels.
- Implemented JWT cookie-based authentication, Google OAuth login, CSRF protection, and role-based access control.
- Developed real-time notifications and collaboration features using Socket.IO.
- Added file attachment upload, task due-date reminders, and advanced search functionality.
- Integrated Stripe payments for Pro plan subscriptions and upgrade flows.
- Used NestJS, Next.js, MySQL, Redis, and Nodemailer to deliver a secure, scalable, and performant system.
- Applied rate limiting and caching to improve security and optimize backend performance.

○ Java Spring boot/SQL :

- Engineered a full-stack web application featuring a RESTful API backend to handle business logic for appointment booking and user management.
- Integrated Spring Security to implement robust user authentication(JWT) and role-based authorization.

○ C/C++ :

- Developed a desktop graphical application to visually demonstrate the Floodfill algorithm, applying core concepts from Data Structures and Algorithms.
- Designed and implemented a 3D space visualization using OpenGL, as part of the Computer Graphics course, focusing on transformations, camera control, and rendering techniques.
